

My Historian

Problem

People start creating their own history book which is unique in the world from birth. However, it is not easy for elderly people to remember all that happened during the day because the physical ability gradually falls as they get older.

Solution

Users wear a tiny device in the form of a ring or a necklace to collect GPS data and just live naturally. A diary which based on the collected GPS data and other information such as weather and breaking news is automatically created. In addition, they can review their diary in various forms on their website.

User Scenario

1. Save GPS data of location that users have visited
 - # Automatic (e.g. every 1 hour)
 - # Manual
(e.g. users push the button when they want to save)
2. Transmit GPS data
3. Search images which GPS data presents
4. Keep a diary with other data and articles
(e.g. weather, breaking news etc.)
5. Replay previous diary which provides text, audio and video on the users' website
